

RESEARCH REPORT

OmniPilot

Personal AI Assistant Research

Voice-first, local-first, multi-interface AI companion
Integrated with the Sidewall product portfolio

Prepared for: Soumya Swain | Sidewall / DevPilot

Date: April 16, 2026 | **Version:** v0.1.0

8. Lessons from Failures

1. Executive Summary

OmniPilot is a personal AI assistant inspired by Omi AI — an always-listening, always-remembering companion that works across desktop, WhatsApp, and mobile. Unlike Omi (hardware pendant) or Humane (failed AI Pin), OmniPilot is **software-only and local-first** — everything runs on your Mac/phone, no data leaves your device.

THE BIG OPPORTUNITY

OmniPilot isn't just another AI assistant. It becomes the **unified voice interface** across the entire Sidewall product portfolio — BizBot, AdPilot, QuickBillPro, TradePilot, DevPilot, SetIn, and DesignPilot. One assistant to manage all your businesses, investments, and life.

Key Findings

KEY INSIGHT

- **Hardware AI is dead.** Humane Pin bricked Feb 2025. Rabbit R1 has 95% abandonment. Software-first wins.
- **India market is perfect** — WhatsApp-dominant culture, 65% phones can run on-device AI, Rs 399-500/mo pricing.
- **BizBot is the killer integration** (95% synergy) — voice-to-WhatsApp for business owners is the hook.
- **Revenue: Rs 2.1 Cr ARR potential** at just 100 users across the portfolio.
- **Tech stack is ready** — Whisper + Ollama + SQLite all run on your Mac today. Zero cloud needed.

- **Your moat** — no standalone assistant has 7 integrated products feeding one brain.

2. Market Opportunity

Market Size

SEGMENT	2025 SIZE	PROJECTED	GROWTH
Global AI Assistant	\$3.35B	\$21.1B by 2030	44.5% CAGR
AI Companion (Global)	\$37.7B	\$435B by 2034	31.2% CAGR
India AI Market	\$5.1B	\$17B by 2027	3x growth
India CPaaS (WhatsApp)	\$1.12B	\$2.36B by 2031	13% CAGR

Why India is the Right Market

PRICE SWEET
SPOT/MO

India Advantages

- **WhatsApp is the platform** — 78% of SMBs already use it for business. That's our distribution channel.
- **Government backing** — \$1.17B IndiaAI Mission for democratization
- **Rural surge** — Rural smartphone adoption up 40% since 2020, now over half of active internet users
- **Price validated** — Google and OpenAI launched India-specific tiers at Rs 399-500/month

PRICING REALITY

Above Rs 2,000/month (\$24), adoption drops sharply outside enterprise. The \$5-10/month range is the sweet spot for India. Free tiers are table stakes (Google/Jio partnership set this expectation).

3. Competitor Landscape

The Battlefield

Product Comparison

PRODUCT	TYPE	PRICE	STATUS	KEY LEARNING
Omi AI	Hardware pendant	\$89 + \$16/mo	Active	Cheap hardware works. Transcription accuracy is weak
Limitless	Software + Pendant	\$99 + \$19/mo	Active, strongest	Meeting intelligence is the beachhead feature
Tab AI	Hardware pendant	\$600	Early	Price too high. Concept unvalidated
Bee AI	Software app	\$15/mo	Active	Software-first pivot was smart
Rabbit R1	Hardware device	\$199	95% abandoned	Everything it does, a phone does better
Humane Pin	Hardware wearable	\$699 + \$24/mo	Dead (bricked)	Cautionary tale. Never be 10x worse than a phone
Notion AI	Workspace tool	\$10/mo	Active	Workspace AI, not personal companion

PRODUCT	TYPE	PRICE	STATUS	KEY LEARNING
Personal.ai	Software	\$40/mo	Slow adoption	Cold-start problem — needs lots of data first

What Winners Got Right

SUCCESS PATTERNS

- **Software-first beats hardware-first** — Limitless, Notion healthy. Humane, Rabbit failed.
- **Meeting intelligence is the beachhead** — Every winner started with "make meetings useful"
- **Sub-\$100 hardware ceiling** — \$89 Omi sells. \$199+ struggles. \$699 dies.
- **Phone is the real competitor** — Must be 10x better than a phone app, not 10x worse

Open-Source Building Blocks

PROJECT	WHAT IT DOES	MATURITY
whisper.cpp	Local speech-to-text, Metal acceleration	Production-ready
Ollama	Local LLM server (Llama 3, Qwen3)	Production-ready
Khoj	Open-source personal AI with memory	Active, growing
Silero VAD	Voice Activity Detection (0.4% CPU)	Mature, MIT
SQLite-vec	Vector search in SQLite	Production-ready
Omi firmware	Open-source wearable firmware	Community-driven

4. Technical Architecture

Everything runs on your M1/M2/M3 Mac with 16GB RAM — no cloud needed.

RAM Budget

Recommended Stack

LAYER	TOOL	WHY	RAM
Voice Detection	Silero VAD	0.4% CPU, MIT, no telemetry	50MB
Speech-to-Text	whisper.cpp + CoreML	27x real-time on M1	1.5GB
AI Brain	Ollama + Qwen3 8B	20-30 tok/s, REST API	5GB
Memory DB	SQLite + sqlite-vec	Single file, hybrid search	100MB
Embeddings	all-MiniLM-L6-v2	384-dim vectors, fast	80MB
Wake Word	Picovoice Porcupine	Custom words, <1% CPU	10MB
macOS App	Swift menu bar	Native audio, low power	—
Mobile	Flutter	Cross-platform, on-device STT	—
Sync	Local HTTP API	No cloud, LAN only	—

How It Works

Key Technical Decisions

DECISION	CHOICE	WHY
Local vs Cloud	Local-first	Privacy, no subscription, works offline
Whisper model	small.en (466MB)	Best accuracy/speed tradeoff on M1
LLM model	Qwen3 8B Q4	Fastest quality model in 5GB
Database	SQLite	Single file = easy sync between devices
Mobile	Flutter	Cross-platform, existing team experience

5. Portfolio Integration

Synergy Scores

Integration Map

Top Integrations

BizBot (95% Synergy) – HIGHEST PRIORITY

BizBot automates WhatsApp/Email/Call. OmniPilot becomes the voice layer on top.

VOICE COMMAND	WHAT HAPPENS
"Reply to that caller — send quote by 5 PM"	Routes response through BizBot WhatsApp
"How many inquiries today?"	"12 WhatsApp, 3 emails, 1 missed call"
Overhears phone call with prospect	Auto-creates lead in BizBot with context

QuickBillPro (80%)

VOICE COMMAND	WHAT HAPPENS
"Invoice Brand Tusker — Rs 2.3L + GST"	Creates and sends invoice
"How much does client X owe?"	Instant AR aging, no app needed
Hears "payment came through"	Auto-marks invoice as paid

DevPilot (85%) & TradePilot (70%)

VOICE COMMAND	WHAT HAPPENS
"Sprint status for TradePilot?"	Pulls from DevPilot DB (43 MCP tools)
"How's my portfolio today?"	Real-time P&L from TradePilot
"Mark task STAB-003 done"	Voice-driven sprint management

Cross-Product Intelligence

THE REAL MOAT

Single-product queries are useful. **Cross-product commands are transformational:**

"Brand Tusker's campaign is performing well. Send a thank-you on WhatsApp and draft next month's invoice."

— AdPilot + BizBot + QuickBillPro in one command

"My TradePilot profits this month are Rs 50K. How much GST do I owe?"

— TradePilot + QuickBillPro

6. Revenue Model

Pricing Tiers

TIER	WHAT'S INCLUDED	PRICE	TARGET
Personal (Free)	Desktop companion, memory, summaries	Rs 0	Personal use
Pro	+ WhatsApp bot + 2 integrations	Rs 499/mo	Professionals
Business	+ All products + cross-product	Rs 1,999/mo	SMB owners
Enterprise	+ Custom integrations + team	Rs 15,000+/mo	Companies

Unit Economics (100 Users)

Rs 17.5L MONTHLY REVENUE	Rs 2.1 Cr ANNUAL ARR	Rs 5K- 8K BIZBOT ADD-ON/MO	Rs 50K+ ENTERPRISE SETUP
---	---	---	---

B2B Add-On Revenue

PRODUCT	ADD-ON PRICE	ANNUAL (100 USERS)
BizBot customers	+Rs 5K/mo	Rs 60L
AdPilot customers	+Rs 5K/mo	Rs 60L

PRODUCT	ADD-ON PRICE	ANNUAL (100 USERS)
QuickBillPro	+Rs 3K/mo	Rs 36L
TradePilot	+Rs 3K/mo	Rs 36L
Enterprise	+Rs 15K/mo	Rs 18L
Total		Rs 2.1 Cr/year

7. Competitive Moat

OmniPilot vs Standalone Assistants

DIMENSION	OMI / LIMITLESS	OMNIPILOT (SIDEWALL)
Memory	Generic life logging	Domain-specific per product
Actions	Limited integrations	Deep actions across 7 products
Context	Personal only	Personal + business + financial
Revenue	Hardware margins	SaaS recurring per vertical
India	No India features	GST, WhatsApp, INR, languages

The Flywheel

Five Layers of Defensibility

COMPETITIVE ADVANTAGES

- Proprietary product graph** — Deep integrations with 7 products spanning ads, billing, communication, trading, design
- Shared cross-domain context** — Knows your invoice AND campaign AND trade position. Context compounds
- Indian market depth** — GST, WhatsApp-first, INR trading. Global competitors don't serve these
- Existing customer base** — BizBot, AdPilot already have paying customers. Upsell, not cold start

5. **DevPilot engine** — Battle-tested orchestration/knowledge infrastructure powers the backend

8. Lessons from Failures

PRODUCT	WHAT WENT WRONG	LESSON FOR OMNIPILOT
Humane Pin (\$699)	Solved nothing better than a phone. Bricked Feb 2025	Never build hardware worse than a phone app
Rabbit R1 (\$199)	95% abandonment. "A \$199 Android app"	Software-first. Phone is the platform
Personal.ai	Cold-start: needs tons of data before useful	Seed memory from existing product data
Tab AI (\$600)	Too expensive, unproven	Start free/cheap. Prove value first
Generic assistants	No daily habit. "Cool demo, never opened"	Integrate into existing workflows

"The bar is not 'better than nothing' but 'better than a smartphone app.' Software on existing devices wins. Hardware-first dies."

9. Build Roadmap

PHASE	TIMELINE	DELIVERABLE	MILESTONE
Phase 1	Week 1-2	Desktop companion (Mac menu bar)	"Listen and remember" working
Phase 2	Week 3-4	WhatsApp bot	Voice note to memory pipeline
Phase 3	Month 2	Flutter mobile app	Full mobile companion
Phase 4	Month 2-3	BizBot integration	First product integration
Phase 5	Month 3+	All product integrations	Full portfolio assistant
Phase 6	Month 4+	Hardware exploration	Optional BT pendant

NEXT STEP

Tomorrow: Build Phase 1 — Install Ollama + Whisper, create Swift menu bar app, implement SQLite memory, build "listen and remember" pipeline. By end of day, you'll have a working personal AI on your Mac.

OmniPilot

Your voice. Your data. Your products.
One AI assistant to manage everything.
